Justin Atteberry

justin_atteberry@yahoo.com • justinatteberry.github.io

Relevant Education & Skills:

B.S. Degree, Computer Science

SQL & Python (database manipulation), Java, JavaScript, HTML

Database management and analysis using SQL, Tableau, Anaconda, MySQL

Profile:

Long term passion for technology and data analytics, leveraging excellent interpersonal communications skills with high technical aptitude. Task-oriented, skilled and focused problem solver with high initiative. Recognized as a collegial, self-directed professional with an informed and passionate mind set and a commitment to personal growth.

PROFESSIONAL EXPERIENCE

2Life Communities — 2025 – Present

CRM System Administrator – data management, data analysis, integration

Entrusted with a wide range of CRM administration and data management activities, working across multiple teams and applying initiative to identify and respond to organizational needs, completing critical projects which enhance data integrity, cross-system automation, and the efficiency of reporting and visualization processes.

Technology Project Highlights:

- Developed Python (Jupyter Notebook) automation to streamline resident data importing, reducing manual data entry workload
- Designed and deployed a multi-interactive donation form with JavaScript, including URL passthrough parameters for post-donation redirection
- Created AppSheet app for front desk package management, leveraging Salesforce-Google Sheets connector for real-time data sync.
- Built a Power BI dashboard for Fund Development to support grant applications, translating fundraising data into actionable visual insights

Webb Transportation — 2023 – 2025

IT Manager – integration, data management, process documentation

Responsible for a wide range of activities in the above areas, working in challenging situations and applying initiative to identify and respond to company needs, and completing critical projects which enhance efficiency.

Technology Project Highlights:

- Moved an entire customer database over to a new platform, exporting, cleaning and manipulating the data using Python to allow for seamless entry into the new platform without errors or issues. Cleaned and manipulated data using Pandas and NumPy for database conversion.
- Inherited a broken integration system set up by a past contractor; subsequently solved issues by coding in a new system that works correctly and efficiently, allowing the systems to share information.
- Created Tableau visuals from generated sales reports to showcase sales numbers.
- Inherited a lack of backend CRM; subsequently built an automated process for creating event timeline using information from CRM, generating timeline documents that would prefill with information from the CRM that then can be further edited.

EDUCATION

Loyola University – Chicago, IL — 2017 – 2022

Bachelor of Science in Computer Science (5/22)
